

Windberg Glazing Medium for Oil Paint

The Windberg Glazing Medium has been formulated with Walnut oil to slow down drying time and allow a painter to work longer on a painting before it sets up. Unlike other glazing mediums, this medium will be workable for several hours.

Primary use is for glazing onto an oil painting with transparent colors, or to apply a thin coat onto a dry painting over the area where you want to work back into. This allows you to paint with a Wet- into-wet look even though the painting is dry. May also be used as a dipping medium to loosen up thick oil paint.

Can be used as a thin final coat after painting is complete to give it an even gloss.
